DETAILED ACTION

Specification

1. The disclosure is objected to because of the following informalities:

1. On page 4, line 25: "Figs. 2" should be --Fig. 2--; and
2. On page 12, line 4: "105" should be --104--.

Appropriate correction is required.

Claim Objections

2. Claim 6 is objected to because of the following informalities: in each paragraph " the step " should replace with --a step--. Appropriate correction is required.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claim 4 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Word "canceling" as being indefinite for failing to particularly point out of what subject or matter it is referring to.

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 1 and 6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Uesugi ('827) in view of Sterzer ('711).

Regarding claims 1 and 6, as shown in Fig. 11, Uesugi discloses a mobile communications receiver comprising:

means (1105 and 1106) for extracting a plurality of reception signals by using a plurality of antennas (1101 and 1102) when estimating a transmission signal from reception signals having undergone transmission path distortion; (receiving signals from 1101 and 1102)

means (1107 and 1108) for combining (1103) impulse response sequences in transmission paths (Col 8, Line 12-28); and

means (1104 and 1109) for performing signal estimation on the basis of a new impulse response sequence generated by combining the impulse response sequences.

Uesugi discloses all the subject matter as described above except for explicitly explains canceling delayed wave components having the largest amplitudes.

However, Sterzer discloses a radio signal receiver comprises a signal combiner 232 in figure 2a, which canceling delayed wave components having the largest amplitudes. (Col 10, Line 40-54)

Signal combiner is well known in the art. Therefore, it would have been obvious to one of the ordinary skill in the art at the time of the invention was made to employ the combiner as taught by Sterzer in the system of Uesugi to cancel unwanted uncorrelated noise power in order to reduce the recovered signal error and cancel unwanted noise.

Allowable Subject Matter

7. Claims 2, 3, and 5 are allowed.
8. Claim 4 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action and to include
9. The following is an examiner's statement of reasons for allowance:

None of the prior art either disclose a second delayed wave canceller nor meet all the limitations of the independent claim 2. Claims 3 and 5 are allowable because they are dependent upon claim 2.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
